Problem Solver @ College

Category : This app is under category productivity/tools.

Purpose : The idea of making app struck my mind when I saw maximum of student in my college as well as in other colleges are indulged in cigarettes , alcohol and for them it wasn't a big deal and when I ask them about the rules and regulations of doing this illegal things within college campuses. They even didn't know what are penalties they need to face if caught which gave me real shock. Hence my app is made for demo purpose at college level only.

App Features

1) Basic Rules and Regulations and their Penalties

2) Send Automated Message to person in charge in college when any illegal activity is observed in college. The whole process is anonymous as no one name will be disclosed.

Functionality : The main functionality of app is to send instantaneous automated message to person in charge within the college when there is any illegal activities/rape/smoking/ragging is going on through the college campus.

I also increase the thought of this app by making it implement in lecture halls, lab buildings, cafeteria and almost all places where there is technical or initial problem such as no computer working in lab, problem in projectors , no water at hostel wash rooms and many other stuff like that.

Business Model : As through this app we can make huge business with smart phone company and posting advertisement to the app as this app targets youths and for them its compulsory to download as per college implemented rule.

Result : As a result by improvising this app more we can implement this app at very basic college level. Through this app each student will have a fear of other while doing any illegal activity within college campus and I think that government of India should make this app as pre-installed in every new smart phones mobiles .Through this simple implementation we can bring a great change.

As 2nd year college student I feel that we need to bring some solution to the above issue as it is very serious rising problem as maximum of Indian youngsters are indulged in cigarettes , alcohol or the other drugs available. App is the solution to this alarming situation.

Note : According to code on clicking into the app in many parts message will be send to my mobile number(**9687395092**) so if for live checking of app please send me email at aenikshah@gmail.com with mobile number you want to check.

My whole code is also uploaded in the below link:
